Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
alpha subunit of rod photoreceptor CNG-channel - chicken
C;Species: Gallus gallus (chicken)
C;Species: Gallus gallus (chicken)
C;Date: 13-Sep-1996 #sequence_revision 13-Sep-1996 #text_change 13-Aug-1999
C;Date: 150680
R;Bonigk, W.; Altenhofen, W.; Muller, F.; Dose, A.; Illing, M.; Molday, R.S.; Kaupp, U.F
Neuron 10, 865-877, 1993
A;Title: Rod and cone photoreceptor cells express distinct genes for cGMP-gated channels
A;Reference number: 150680
A;Accession: 150680
A;Accession: 150680
A;Accession: 15080
C;Superdamily: cyclic nucleotide-gated channel; cAMP receptor protein cyclic nucleotide-f;All-555/Domain: cAMP receptor protein cyclic nucleotide-F;All-555/Domain: cAMP receptor protein cyclic nucleotide-

"A 240 kba protein represents the complete beta subunit of the cyclic
"A 240 kba protein represents complete beta subunit of the cyclic
Noclectide-gated channel from rod photoreceptor.";
Neuron 15:627-636(1995). IsoId=Q28181-3; Sequence=VSP\_001108;
-!- TISSUB SPECIFICITY: Retina, testis, kidney, heart and brain.
-!- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel
(TC 1.A.1.5) family.
-!- SIMILARITY: Contains 1 cyclic nucleotide-binding domain. CNG4\_BOVIN STANDARD; PRT; 1394 AA.

Sugimoto Y., Yatsunami K., Tsujimoto M., Khorana H.G., Ichikawa A.
Submitted (XXX-1991) to the EMBL/GenBank/DDBJ databases.
-!- SUBGNIT: Forms functional heterooligomeric channels with CNG3.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- ALTERNATIVE PRODUCTS: Biel M., Zong X., Ludwig A., Sautter A., Hofmann F.; Molecular cloning and expression of the modulatory subunit of cyclic nucleotide-geted cation channel."; J. Biol. Chem. 271:6499-6355(1996). Comment=Isoform CNG4D is the most frequent isoform (CNG4D:CNG4C:CNG4E = 20:2:1) in testis;

-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- SUBCELLUIAR LOCATION: Integral membrane protein.
-!- DISEASE: Defects in CNGA3 are a cause of rod monochromacy (RMCH)
-!- DISEASE: Defects in CNGA3 are a cause of rod monochromacy (RMCH)
-!- MIM:216900]; also known as total colorblindness or achromatopsia.
RMCH is an autosomal recessively inherited condition.
-!- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel
(TC 1.A.1.5) family.
-!- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
-!- DATABASE: NAME-Mutations of the CNGA3 gene;

SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: Integral membrane protein.
SINILARITY: Belongs to the cyclic nucleotide-gated cation channel
(TC 1.A.1.5) family.
SIMILARITY: Contains 1 cyclic nucleotide-binding domain.

                                                                                                                                                                                                                                                                                                                                                                - SUBSUE SPECIFICITY: Olfactory neurons.
- TISSUE SPECIFICITY: Olfactory neurons.
- TISSUE SPECIFICITY: Olfactory neurons.
- MISCELLANEOUS: The Olfactory channel is activated by both cAMP and cGMP at similar concentrations, whereas the cGMP-gated channel is much less sensitive to cAMP.
- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family.
- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.

FUNCTION: Odorant signal transduction is probably mediated by a G-protein coupled cascade using CAMP as second messenger. The olfactory channel can be shown to be activated by cyclic nucleotides which leads to a depolarization of olfactory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CITOLAGENIC (FOIENTIAL).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            323 IARLFEFFDRIETRINYPNMFRIGNLVLYILIIIHWNACIYFAISKVIGFGTDSWVYPNV 382
                                                                                Neuron 10:865-877(1993).
-!- FUNCTION: Visual signal transduction is mediated by a G-protein coupled cascade using cGMP as second messenger. This protein can be activated by cyclic GMP which leads to an opening of the cation channel and thereby causing a depolarization of cone
                                                                                                                                                       photoreceptors.
SUBCELLUAR LOCATION: Integral membrane protein.
SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family.
SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             214 TDRLYLLWLLLVT--LAYNWNCWFIPLRLVFPYQTADNIHYWLIADIICDIIYLYDMLFI

Flockerzi V., Dascal N., Haupp U.B., Hofmann F.;
Primary structure and functional expression of a cyclic nucleotide-gated channel from rabbit aorta.",
FEBS Lett. 329:134-138(1993).
-!- FUNCTION: Odorant signal transduction is probably mediated by a G-protein coupled cascade using cAMP as second messenger. The protein coupled cascade using cAMP as second messenger. The olfactory channel can be shown to be activated by cyclic nucleotides which leads to a depolarization of olfactory sensory

--- SUBCELLOLAR LOCATION: Integral membrane protein.
--- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family.
--- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      01-NOV-1997 (Rel. 35, Created)

Forms heterooligomeric complex with CNG4.
-!-SUBCELLULAR LOCATION: Integral membrane protein.
-!-TISSUE SPECIFICITY: Rod cells in the retina.
-!-DISEASE: Defects in CNGA1 are a cause of autosomal recessive retinitis pigmentosa (ARRP) [MIM:123825]. ARRP is a disease that leads to degeneration of retinal photoreceptor cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUB_Rectina;
